

## **ARTEMATICA VITRUM: The All Glass Kitchen**

Artematica Vitrum expresses Gabriele Centazzo's passion for glass: made from an almost inexhaustible natural material (sand), glass is completely recyclable and sustainable. Transparently elegant, harder than steel, extremely resistant to humidity: tempered glass surfaces are more scratch safe than varnishes, and are totally lacking in toxic emissions.

Valcucine presented Artematica, its first dematerialized panel, in 1988. The cabinet fronts are 5 mm thick tempered glass, the worktops 10 mm thick. Artematica Vitrum has a patented aluminum frame that reduces cabinet weight by 50%, extending the life of hinges and joints, and the life of the overall kitchen. Edges are smooth and safe.

ARTEMATICA VITRUM fronts come in matte (acid etched) or gloss glass, in a wide array of colors: two yellows; bright red; brick; titanium; ebony; parchment; dove gray; smoke; blue; and white (gloss only). Appliances become part of an aesthetic, functionally integrated whole. Best of all for the 21<sup>st</sup> century, the entire kitchen—aluminum, glass, steel, wood—is easy to dismantle, and is labeled for recycling.
